

METIS™ MACRO PARTICULATE

Biocompatible allograft chips and cubes made from cancellous and/or cortical bone, most commonly used for spinal fusion, void filling and sinus augmentation.

Osteoconductive

Metis™ Macro-Particulate provides a scaffold for new bone formation.

Ease of Use

Metis Macro-Particulate exhibit excellent handling when mixed with saline, blood or bone marrow aspirate.

Incorporation and Healing Attributes

Provides an optimal latticework for osteoconductivity.
